

Receive your patients quickly and safely!

TabLog provides a solution for healthcare companies in order to receive their patients quickly and contactless and to have their statements signed and managed without paperwork. We ensure that you will receive your patients making the best impression and maximizing their safety, without any contact with the receptionist, even in the case of joint consultations of more independent doctors.

Advantages of TabLog

TabLog can assist in several areas while receiving patients, increasing efficiency and security, in addition to that, it is easy to interconnect the easy-to-install running-on-tablet registration app with the existing internal system.

COST-EFFICIENT

It can relieve the colleague who manages the arrival administration, automating the data recording and declaration management of the guests thus helping to reduce costs in the field of reception staff.

CONTACTLESS ACCESS

With the contactless access, it is suitable for minimizing contact numbers during the time of arrival.

DATA SECURITY AND DISCRETION

It increases discretion by data recording in accordance with GDPR regulations. Upon request, the system can be run on the customer's own server, and the data will be deleted at the intervals specified in the GDPR.

GUEST EXPERIENCE

The registration can be done automatically, smoothly without queuing thus avoiding the inconvenience and bad experience caused by waiting.

Patient arrival with TabLog

1.

PRE-REGISTRATION

Patients will receive a link in the confirmation of the examination where they can enter beforehand their details required for the registration and accept the institution's data management note and other statements (for example specifications issued in connection with Covid-19). The requested data and documents can be modified at any time and displayed in the native language of a given patient. Patients' personal and health data is stored in the system in accordance with GDPR. regulations.

2.

ARRIVAL

Upon arrival, the patient scans its unique code via cell phone on the TabLog Kiosk and confirms its data, or in default of pre-registration, patient can do so at the Kiosk even without contact. At the end of the registration process, the receptionist can approve the entry in real time, during which patients will receive information and briefing.

3.

NOTIFICATION

The doctor will be notified immediately of the arrival of its patient.
